

CHANGING THE CONVERSATION IN **ADVANCED PROSTATE CANCER**

Prostate cancer is
THE 2ND MOST
common cancer
in men

+

THE 5TH LEADING
cause of cancer death
worldwide, and climbing.

When prostate cancer is
advanced (aPC),

outcomes may be fatal.

aPC care has come a long way

but not everyone gets the
chance to benefit from it.

HEALTH INEQUITY IN aPC CARE

Health inequities diminish the potential impact of
the latest treatment options and lead to poorer
outcomes for many people living with aPC.

It's time to talk about some of the
barriers that people today may be facing.

Discrimination due to ethnicity

Age-related biases

Low socioeconomic status

Underrepresentation in clinical trials

Rural and low-resource settings

EQUITY IN aPC BEGINS WITH A CONVERSATION

We are working to change the
conversation in aPC by shining a light
on inequities in care around the world
and exploring the causes behind them.

Because change starts with
a conversation.

**CHANGE THE
CONVERSATION**
in aPC
